

Google AdSense Compliance Report

Website Check for TechLearners (techlearners.in)

Date of Assessment: June 19, 2026

1. Executive Summary

A comprehensive programmatic and structural audit has been conducted on the **TechLearners** educational website codebase. The objective was to assess compliance with the Google AdSense Program Policies, EU User Consent Policy, and general web quality guidelines (E-E-A-T) prior to submission.

The site is **fully compliant** and ready for submission. Below is a summary of the compliance checklist.

Category	Status	Key Findings & Details
Legal Pages	PASS	Privacy Policy, Terms, Disclaimer, and Editorial Policies exist and are correctly integrated in the footer.
Consent Flow	PASS	Advanced cookie banner implements explicit user preference management for GDPR/CCPA and sets personalization limits.
Links Integrity	PASS	Programmatic link crawling verified zero broken links across all HTML files.
ads.txt	PASS	Valid file matches the publisher script ID in site headers.
SEO / Sitemap	PASS	Crawlers are guided by clear robots.txt and sitemap.xml indexes.
Original Content	PASS	Substantial learning content on CBSE Class 9 & 10 AI and IT is bundled directly in JSON and text files.

2. Policy Disclosures & Required Pages

Google AdSense requires that sites present complete transparency regarding their operators and operations. The following pages were analyzed:

- **Privacy Policy** (privacy.html): Includes details on user data (Firebase Auth), essential and analytical cookies, and a specific section outlining Google AdSense cookie usage. Standard Google settings opt-out links are provided.
- **Terms of Service** (terms.html): Outlines user rules, intellectual property rights, restriction of commercial abuse, and disclaimer of academic guarantees.
- **Disclaimer** (disclaimer.html): Sets expectations regarding content correctness and references external services such as YouTube embeds.
- **Editorial Policy** (editorial-policy.html): Assures visitors of active correction channels and academic verification steps.
- **About & Author Pages** (about.html, author.html): Standardizes E-E-A-T parameters by identifying the educator, Umesh Tripathi, and detailing the portal’s mission.

- **Contact Page** (contact.html): Provides a working query form, support email (support.techlearners@gmail.com), and physical contact details.

3. Programmatic Quality Checks

A. Broken Links Assessment

An automated link checking script parsed every internal href attribute in all HTML documents across the workspace. Broken links are a major factor in AdSense manual review rejections due to “difficult site navigation” policies.

- **Results:** Checked all internal hyperlinks.
- **Report: 0 Broken Links found.** All menu and footer links point to valid HTML pages.

B. GDPR & EU User Consent Integration

The consent framework implemented in assets/js/main.js correctly interfaces with the Google AdSense advertisement tag.

- If a visitor customizes cookies and opts out of personalized advertisements, the site sets: `window.adsbygoogle.requestNonPersonalizedAds = 1;`
- This aligns with Google’s strict requirements for the EU User Consent Policy.

C. Crawler Accessibility and ads.txt

- The ads.txt is present at the root of the domain and is properly mapped: google.com, pub-1264513920933707, DIRECT, f08c47fec0942fa0
- robots.txt correctly allows crawling of study paths (Allow: /) and hides dashboard management pages (Disallow: /pages/admin/).
- sitemap.xml provides accurate indexing paths for all educational modules.

4. Final Submission Checklist for the Publisher

Before initiating the final site submission, the publisher should perform the following operational checks:

1. **Verify Search Console Properties:** Ensure the domain `https://www.techlearners.in/` is verified under your Google account, and your `sitemap.xml` is successfully submitted with “Success” status.
2. **Crawl Validation:** Confirm in Search Console that at least 15-20 study notes pages are already indexed. AdSense reviews are significantly faster when Google’s indexer already knows your content.
3. **Ad Placement:** Enable “Auto Ads” in your AdSense console or place responsive ad units in sidebar/inline positions. Do not place ads near menus or clickable images to avoid accidental clicks.
4. **Visual Layout:** Check that your cookie notice banner is readable and has a clear close/action button on all mobile resolutions.
