

Personal Hygiene - It is a habit or a practice through which we keep ourselves clean.

### Suggestions For Boosting Self-Confidence

The following are a few suggestions for boosting self confidence.

- Take care of your body and maintain good health.
- Dress appropriately and smartly.
- Maintain a circle of good friends.
- Talk to yourself positively each day.
- Respect others and help them.
- Learn to say no to unreasonable requests.

## Chapter - 9

### Introduction to ICT

What is ICT?

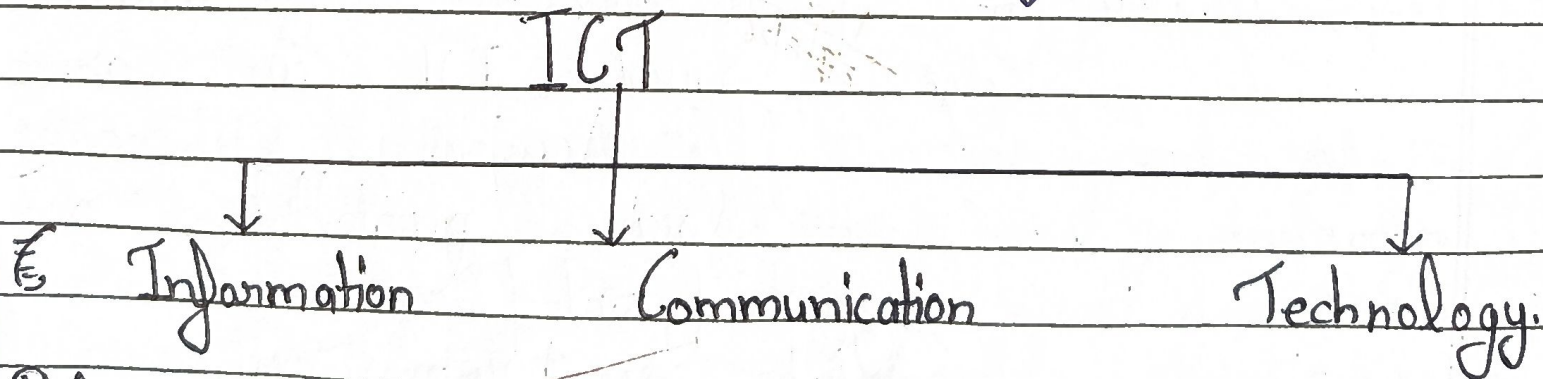

Ans. ICT is the short form of Information and Communication Technology.

Each component of Information and Communication Technology is explained below.

Information :- It is basically facts and figures that are of value to the recipient.

Communication :- Communication is the act receiving, giving or sharing information with others in an understandable form.

Technology :- Technology is the application of scientific knowledge to perform practical task in our daily lives.

Role of ICT

Information Technology (IT) aim at making required information available at a faster

speed and with more ease.

## Importance of ICT

ICT is continuously influencing our lives and changing our work methodologies. There is hardly any area ~~left~~ now, where its application and effects cannot be observed.

## ICT in daily life

These days, people are making use of ICT for their day-to-day tasks. Every sphere of life is greatly influenced by ICT. The following are the developments that have taken place in the recent past.

- 1) Students attend classes and take examinations online.
- 2) People sell and advertise their products online.
- 3) Payment of bills, taxes, dues etc can be easily done using ICT applications.
- 4) Railway, air, movie and other types of tickets can be booked in advance sitting at home.
- 5) You can call a taxi using your mobile phone.

## ICT tools

All those devices and equipment that are used for introducing information and communication technology in the work environment for enhancing the ease of operations and increasing the efficiency of work are called ICT tools.

The following are the most commonly used ICT tools:

- Desktops and Laptops.
- & Smart Phones
- Tab
- E-Readers
- Radio
- TV
- ATV, etc.

## Software

Software is a series of instructions that make an ICT device work for us.

The following are the few popular software packages that fall into the category of ICT tool

- Electronic Spreadsheet :- It is used for classifying data and presenting it in the

form of tables. It also provides facilities to define formulae and perform automatic calculations. Charts and graphs excel.

Microsoft Excel, Apple Numbers, Quip, EtherCal etc.

- **Data Based Management :-** It is used for storing large volumes of data on the computer and retrieving it as per requirement MS-Access, MYSQL, Oracle etc.
- **Web Browser :-** Web Browser is the software using which the entire World Wide Web can be searched and the information there can be viewed. Few popular web browsers are : Google Chrome, Microsoft Edge, Mozilla Firefox, Apple's Safari etc.
- **Search Engines :-** Search Engines are used for finding any type of information on any topic on the internet. One has to specify the topic of choice called a "search term". Popular search engines are - Google search engine, Microsoft Bing, Yahoo search engine, Baidu, DuckDuckGo etc.

## Chapter - 10 Introduction to computer system.

### Introduction :-

A computer is an electronic device that accepts data from us, processes it, and displays the information.

**Data :-** Raw facts and figures are termed as data.

### Processing :-

The act of performing arithmetic and logical operations is called processing.

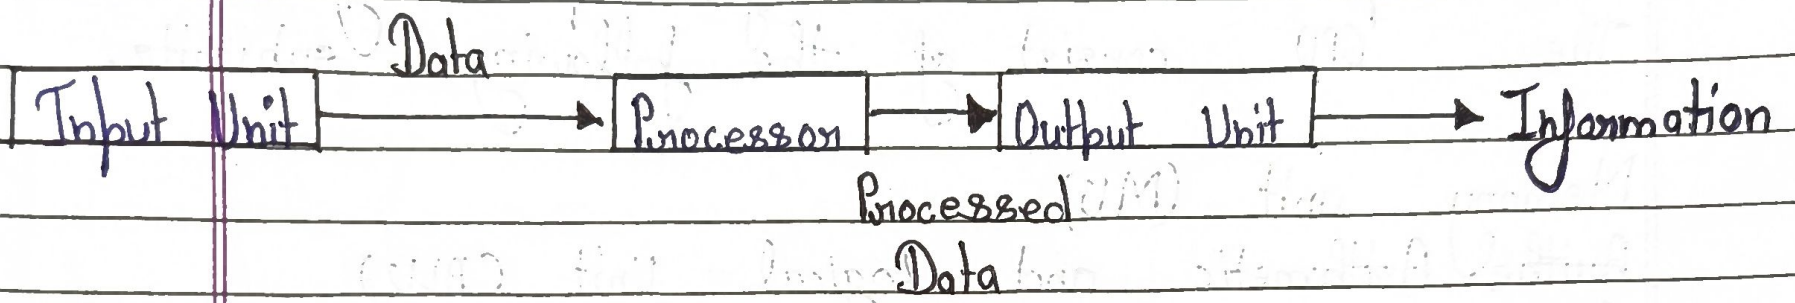

- Arithmetic operation like addition, subtraction, multiplication and division are examples of processing.
- Logical operation like  $A > B$ ,  $A = 100$ ,  $A \text{ OR } E < 65$  are also examples of processing.

**Information :-** The result obtained after processing the data is called information.

Note that the computer comprises different types of units, using which all these tasks are performed. The input unit of the computer takes

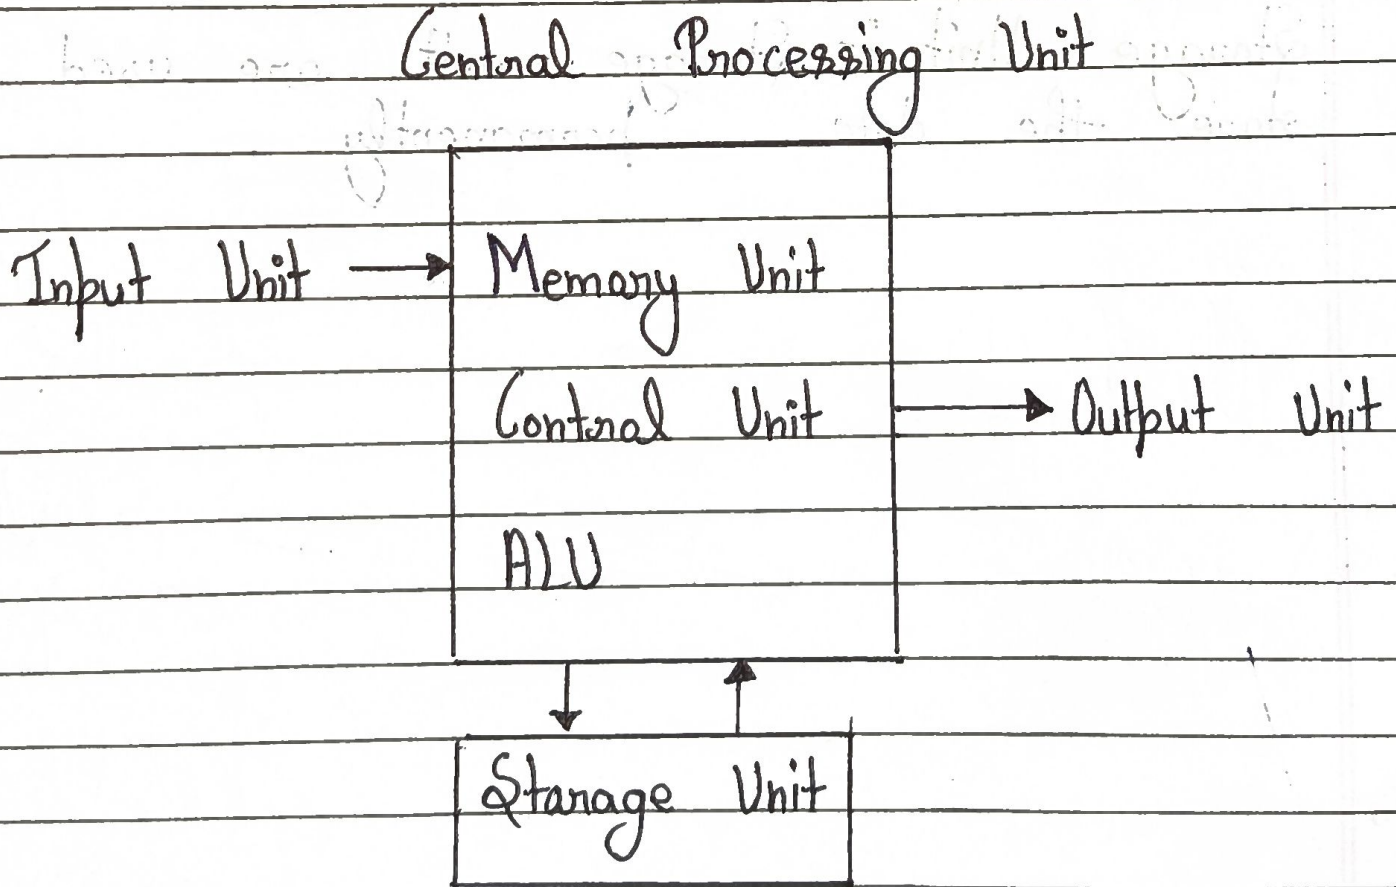

The data from us. Its processor processes the data and its output unit displays the result.

### Computer Organisation

The computer is an electronic data processing device. It comprises of the following units:

**Input unit :-** The input unit is used for entering data in computer. A keyboard

is the main input unit that is used for entering data.

Central Processing Unit :-

It is main unit of the computer. It is used for processing data. The CPU consist of the following subunits.

Memory unit (MU)

Arithmetic and Logical Unit (ALU)

Control unit (CU)

Output Unit :- The output unit is for displaying the result. A monitor is the main output unit that is used on every computer.

Storage Unit :- Storage unit are used to store the data permanently.
